

# Cash Registers

## EX570

### Affordable Business Control - HOSPITALITY

The EX570 cash register offers many of the advantages normally only found on advanced EPOS systems. Available with a flat or raised keyboard the EX570 is suitable for hospitality and can be used in bars, café's, bakeries and quick service outlets.

Connecting these machines together allows you to form a simple EPOS system, which can be further enhanced with links to Uniwell's back office management software such as EPOS Office to provide back of house sales analysis, POS management, stock control and ordering. The EX570 comes with a numeric pop up customer display, twin thermal printer for receipt and journal, cash drawer and multi-line operator LCD display.

- Feature rich

### System Integration

- Bar Code Scanner
- Kitchen Printer
- Slip Printer
- EPOS Sales Back Office Software
- EPOS Office Back Office Software

### Applications

- Bar
- Catering
- Quick Service
- Cafe

## EX570 Specification

### EX570 - Benefits:

#### Software 03 type: Hospitality

**Cash Control:** At the end of each shift the financial report clearly identifies the value of money that should have been taken by each method of payment - this is used to reconcile against the actual cash in drawer.

**Sales Analysis:** The EX570 allows you to monitor your sales mix, products can be linked to 10 main groups (Wet, Dry etc) and 64 sub groups (Bottle Beer, Draught Beer, Spirits etc). In addition products can be linked to a further 25 groups which could be used to track product sales by supplier.

**Operator Analysis:** Individual operator performance (up to 32) can be monitored allowing you to keep an eye on the most productive staff and those making the most "mistakes". Up to 4 commission rates can be used providing managers with a way of giving incentives to operators.

**PLU / Group Sales per Clerk:** Easy to find which operator sold a pre selected list of 20 products the most. With this feature, each clerk is motivated to sell more of those products.

**Table Management System:** Allows each separate transaction to be stored temporarily and picked up for additional orders to be added. Split Bill function expedites table operations.

**Clerk Interrupt System:** Allows different operators to concurrently register sales transactions on the same ECR. Each operator's registrations are stored under that particular operator so when they log on again they are able to resume their transaction.

**Customer File:** With an optional memory board, up to 1024 customers' telephone number, VAT number, name and address can be recorded. Very convenient when issuing bills, especially for delivery service and frequent customers who require the bill with their name and VAT number printed.

**Look Up PLUs:** A range of categorized PLUs can be displayed as - an on screen list for selection by a "Look Up PLU" key.
